**E15 Fuel Now Available in Orlando Area
Kissimmee Citgo, Protec Fuel, Expand E15 Availability in Fla.**

KISSIMMEE, Fla.–May 20, 2015 –Offering the first E15 in the greater Orlando area, Kissimmee Citgo, assisted by Protec Fuel, has launched the 88-octane E15 ethanol blend fuel. E15 can run in any 2001 and newer gasoline engine and costs less than regular gas. The station also sells E85 fuel and B20 biodiesel fuel, which makes it important in the growth of emissions-reducing, renewable fuels.

This location is the first in the Greater Orlando area and is located at:

- Kissimmee Citgo
3297 S. John Young Pkwy,
Kissimmee, FL 34746.

“We are extremely excited to be the first in Central Florida to offer this additional grade of ethanol fuel,” said Ken Allen, president of Mid-State Energy, Inc., “and offer our customers more choices as it comes to fueling. This tourist destination area is especially prime with all the rental cars that can run on E15, and even E85.” Mid-State Energy, Inc., www.midstateenergy.com, owns, and provides fuel at, this station.

These are part of Protec Fuel’s station rollout of dozens of E15 sites to metropolitan areas that include various cities in the South and Southeast. This is the fourth location under Protec to open in Florida.

“The growth of alternative fuel vehicles and the infrastructure required to support their expansion is flourishing in Central Florida,” said Colleen Kettles, Central Fla. Clean Cities Coalition Coordinator. “The CFCCC is proud to partner with Protec Fuel as they introduce this ethanol fuel blend to our region. This option provides

our public and private fleets, as well as the general public, with yet another option to reduce the use of petroleum to power their vehicles,” she said.

Protec Fuel, based in Boca Raton, Fla., has partnered to help manage the ethanol blends installation and provide fuel for the locations’ new cleaner-burning fuels. “I’d like to thank Citgo and Protec’s longtime partner Mid-State Energy for giving choices at retail stations,” said Todd Garner, CEO of Protec Fuel. “These choices fuel the spirit of the American driver, with freedom to choose a fuel that meets their needs – such as environmental benefits, or helping the U.S. become more energy independent.”

The fuel pumps are open 6 am – 12 am, and the location can be reached at 407-932-4443. Currently, and typically, both E15 and E85 are selling for less than regular gasoline. A grand opening celebration will be held at the start of summer.

E15, a blend of 15 percent ethanol and 85 percent gasoline, is the most widely tested fuel ever sold to consumers. The ethanol portion of these fuels is 100% U.S.-made and supports jobs and keeps our money in local communities. Ethanol burns cleaner and cooler in engines, which helps the performance level of the vehicle. It also can extend the life of the engine. Since E15 can run in any 2001 or newer gasoline engine, that equates to 80% of vehicles in the U.S.

E85 is an alternative fuel blend that can be used in over 18.5 million vehicles across the U.S. E85 is a blend of 85% ethanol and 15% gasoline that can be used in flex-fuel vehicles (FFVs). There are over 100 FFV models on the market today that can run on E85. Visit www.flexfinder.org to see if you have an FFV. Click here for further E85 station locations (<http://www.afdc.energy.gov/locator/stations>). This alternative has been proven to reduce greenhouse gas emissions and reduce the nation’s dependency on foreign petroleum.

###

About Protec Fuel: Protec Fuel is a fuel distribution and management company based in Boca Raton, Fla., specializing in turnkey ethanol programs for retailers, fleets and fuel distributors throughout the U.S. Its comprehensive approach includes ethanol supply; financial risk management programs; site selection and pump installation; and RINS management. Protec supplies fuel for, either directly or through distribution partners, or conducts installation for over 200 E85 stations. www.protecfuel.com

About Clean Cities Coalitions: Clean Cities coalitions throughout the nation are charged with reducing the nation’s petroleum usage by the U.S. DOE. See more at <http://centralfloridacleancities.com>.
